1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. Note MPEP 606.01.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

**The abstract should be** in narrative form and generally **limited to a single paragraph** on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The drawings are objected to because Figs. 3 and 5 should be labeled as "Prior Art" since they are disclosed as such.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet"

pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 and 6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It is not clear what components make up the video composition unit (there is no one numeric label for such as there are for other elements) and the specification discloses its components ambiguously. Figs. 1 and 2 are the only Figures depicting that which covers the video composition unit by the specification.

It does not seem possible for the composition unit, based on how it is both claimed and disclosed (in applicant's amended specification as well as in the remaining unamended specification), to perform vertical filtering on both the alpha-blended video data stored in the storage unit and combined with data output from the video processing unit 103. The video processing unit is disclosed and shown as performing all of these functions (composite unit 103 in Fig. 2), whereas the composition unit is not exactly accounted for. Claim 1, however, recites specific functions per respective stages, with the composition unit somehow functioning

downstream, yet performing one of the functions as well (i.e. combining the plural pieces output from the processing unit.

Furthermore, applicant describes the alpha-blending itself performing vertical filtering, but says in claim 1 that vertical filtering is done to alpha-blended data.

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 and 6 are also rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Because claim 1 is ambiguously recited (as it mirrors the specification), its scope is indefinite.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The claims have not been rejected based on prior art due to their ambiguous definition. MacInnis seems the most relevant of the art cited (insofar as the general description of applicant's system is disclosed).
